William Stokes-Administrator

Dear Will:

This letter is to serve as an application for a mining permit under mineral lease #48081.

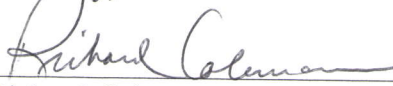

It is the specific intent of Richard Coleman to comply with any and all Utah State requirements for said permit.

My plan of operation would be very simple-to load and haul the metalliferous metals off the land by use of established trails and roads already in use. These are shown on the map enclosed.

These are deposited metals and recovery is very simple, with no appreciable difference in the structure of the land. The area gathered would be approximately 3 acres as shown on said map. Also in answer to your questions, please find the following:

- 1.) No water courses will be disturbed
- 2.) Rabbit brush is the main vegetative cover
- 3.) No explosives or chemicals
- 4.) A portable toilet will be on the acreage
- 5.) A medium sized front-end loader and dump trucks
- 6.) The roads and trails indicated on the map will be improved by gravels
- 7.) No bore holes
- 8.) Manner and method of mining will be simply loading of materials-open pit
- 9.) As shown on map
- 10.) No topsoils
- 11.) None
- 12.) Gravels will be taken down to bedrock
- 13.) Accounting for every load of gravels taken from the site
- 14.) As per trust lands recommendations

Sincerely,

Richard Coleman
